Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention describes a human monoclonal antibody to parachycrid hormone related protein (FTHTP). The monoclonal antibody or parachycrid hormone related protein (FTHTP). The monoclonal antibody or tits fragments, following the stimulation of FTHTP has the following properties: (a) inhibits intracellular elevation of cAMP; (b) inhibits the release of calcium from bone; or (c) inhibits alevation of blood calcium content. The monoclonal antibody can be used in the treatment of hypercalcaemia, rheumarcid arthritis, cancer of bone including metastasis, pain, fracture, cachexia, diseases of teeth, periodontal diseases and gingira actual systemic inflammatory response syndrome (SIRS) and hypophosphateemia. It has antiarthritic, cytostatic and antianilammatory activities. The present sequence represents a human PTHTP monoclonal antibody clone nucleotide sequence from the
                                                                                                                                                                                                             Human, parathyzoid hormone related protein, FTHrP, monoclonal antibody, hypercalcaemia, rheumatoid arthritis, bone cancer; metaetasis, pain, fracture, cachexia, toth disease, periodontal disease, gingiva, espsis, systemic inflammatory response syndrome; SIRS, hypophosphataemia, antiarthritic, cytostatic, antinflammatory, ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A human monoclonal antibody to parathyroid hormone related protein. - useful for treating hypercalcemia, rheumatoid arthritis, cancer of bone including metastasis, and pain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TCTGGGGTCCCAGACAGATTCAGCGGCAGTGGGGCAGGGGACAGATTTCACACTGAAAATC 300

The present invention relates to antirheumatic agents which comprise as active ingredients an immunoglobulin M (IgM) protein. The IgM protein does not include a J segment, has apoptosis inducing activity, and consists of a light and heavy chain polypeptide produced synthetically. The agents of the invention exhibit antirheumatic and immunosuppressive activity and can be used to trast autoimmune diseases, especially consists. Included in the invention has human Fas-antigen binding properties. Included in the invention are nucleotide sequences of the IgM molecule (see AAB12913-B12918 and ABB12919), and corresponding protein sequences (see AAB12913-B12918 and ABB12919), and cucleotide sequences of the humanised anti-human Fas Ig CH11 (see CaAA78202-A78266) and protein sequences (see AAB12913-08208-B12910). Also included are anti-human Fas antibody CDR peptides (AAA18202-B12910). Also chains used in the invention are represented by sequences AAA78210-B12910 and humanised anti-human Iga antibody and protein are represented by sequences AAA78213-A78266. Frincer used for sequences Dy Sequences AAA78213-A78266. Primers used for sequences AAA78213-A78266. Primers used for sequences AAA78213-A78318 and AAA78313-A78317, while humanised anti-Fas Ig DNA sequencing primers are represented by sequences AAA78313-A78367. Primer used in the invention are represented by sequences AAA78313-A78367. Primer represented by sequences AAA78313-A78367. Primer conduction of the agent of the invention.

This cDNA sequence codes for a humanised anti-Fas antibody CH11 light chain (see AAW71876), designated VL-KY. VL-KY is based on the light chain (see AAW71876), designated VL-KY. VL-KY is based on the light chain (see AAW71899) of murine anti-human Fas monoclonal antibody CH11. The humanised sequence was designed following selection of donor residues from CH11 to be grafted onto acceptor on molecule RPMIG410'CL. 4 Light chain sequences (see AAW71876-79) have been designed, and each can be used in combination with either of 2 humanised CH11 IgM antibodies that lack a J chain. These humanised cut-human Fas antibodies are capable of inducing apoptosis in cells expressing Fas (e.g. synoviocytes) and are useful in the treatment of autoimmune disease and chronic rheumatoid arthritis. DNA sequences encoding the humanised antibodies are claimed, as are vectors such as pHkappaKY2-58 including the VL-KY nucleotide (FERM BP-5861).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          540

The present invention relates to antirheumatic agents which comprise as active ingredients an immunoglobulin M (IgM) protein. The IgM protein does not include a J segment, has apoptosis inducing activity, and consists of a light and heavy chain polypeptide produced synthetically. The agents of the invention exhibit antirheumatic and immunosuppressive activity and can be used to treat autoimmune diseases, sepecially rheumatism. The IgM molecule used in the invention has human Fasantigen binding properties. Included in the invention are nucleotide sequences of the humanised anti-human Fas Ig CH11 (see AA78202-A78202-A7820) and heavy chains (see AA912913-B12918 and AAB12902-B12919), and nucleotide sequences of the humanised anti-human Fas Ig CH11 (see AA78202-A78206) and protein sequences (see AAB12908-B12910). Also nucleotide are anti-human Fas antibody, Ilght, heavy and kappa chains used in the invention are represented by sequences AA78213-A7813 and AA78213-A78315. Primers used for sequences AA78217-A7818 and AA78213-A78315. Primer sequences AAA78213-A78318 and AAA78217-A78318 and AAA78217 9999999999999999999999988

The present invention relates to antirheumatic agents which comprise as active ingredients an immunoglobulin M (IgM) protein. The IgM protein does not include a J segment, has apoptosis inducing activity, and consists of a light and heavy chain polypebtide produced synthetically. The agents of the invention exhibit antirheumatic and immunosuppressive activity and can be used to treat autoimmune diseases, especially rheumatism. The IgM molecule used in the invention has human Fas-antigen binding properties. Included in the invention are nucleotide sequences of the IgM light and heavy chains (see AAA78267-A78272) and the corresponding protein sequences (see AAA78267-A78272) and the nucleotide sequences of the humanised anti-human Fas antibody (DR peptides (AAB12912-B1299).

The Included are anti-human Fas antibody (DR peptides (AAB12902-B1290)).

Primers specific for the anti-human Fas antibody, light, heavy and kappa chains used in the invention are represented by sequences AAA78217-A78318 and AAA78335-A78337, while humanised anti-fas IgD DNA sequencing primers are represented by sequences AAA78318-A78337, while humanised anti-fas IgD DNA sequencing primers cepresented by sequences AAA78318-A78337. Primer represented by sequences AAA78338-A78337.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This cDNA sequence codes for a humanised anti-Fas antibody CH11 light chain (see AAW71893), designated VL-RY. VL-RY is based on the light chain (see AAW71893) of murine anti-human Fas monoclonal antibody CH11. The humanised sequence was designed following selection of donor residues from CH11 to be grafted onto acceptor molecule RPMI6410'CL. 4 Light chain sequences (see AAW71876-79) have been designed, and each can be used in combination with either of 2 heavy chain sequences (see AAW7180-81) to provide novel, claimed humanised cH11 IgM antibodies that lack a J chain. These humanised anti-human Fas antibodies are capable of inducing apoptosis in cells expressing Fas (e.g. synovicoytes) and are useful in the treatment of autoimmune disease and chronic rheumatoid arthitis. DNA sequences encoding the humanised antibodies are claimed, as are vectors such as pHkappaRX2-10 including the VL-RY nucleotide
(FERM BP-5859).

cc selection of donor residues from CH11 to be grafted onto acceptor cc selection of donor residues from CH11 to be grafted onto acceptor CC molecule RPMI6410'CL. 4 Light chain sequences (see AWW1876-79) have cc been designed, and each can be used in combination with either of 2 cc heavy chain sequences (see AWW1880-81) to provide novel, claimed channanised CH11 IgM antibodies that lack a J chain. These humanised anti-human Fas antibodies are capable of inducing apoptosis in cells cxpressing Fas (e.g. synoviocytes) and are useful in the treatment of autoimmune disease and chronic rheumarcid arthritis. DNA sequences encoding the humanised antibodies are claimed, as are vectors such as phkappaKP2-19 including the VL-KF nucleotide cequence, and host cells such as Escherichia coli pHkappaKF2-19 (FERM BP-5860).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             540

The humanised anti-human Fas antibodies are capable of inducing apoptosis in cells expressing Fas (e.g. synoviocytes) and are useful in the treatment of autoimmune disease and chronic rheumatoid arthritis.

The present invention relates to antirheumatic agents which comprise as active ingredients an immunoglobulin M (IgM) protein. The IgM protein does not include a J segment, has apoptosis inducing activity, and consists of a light and heavy chain polypeptide produced synthetically. The agents of the invention exhibit antirheumatic and immunosuppressive activity and can be used to treat autoimmune diseases, especially chematism. The IgM molecule used in the invention has human Fas-antigen binding properties. Included in the invention are nucleotide sequences of the IgM light and heavy chains (see AAB12913-B12918 and AAB12919), and nucleotide sequences of the humanised anti-human Fas Ig CH11 (see AAA78202-A78206) and protein sequences (see AAB12908-B12910). Also included are anti-human Fas antibody, Ight, heavy and kappa chairs maniful human Fas anti-human Fas anti-hu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      chains used in the invention are represented by sequences
AAA78213-A78266. Primers used for sequencing the human Ig DNA used in the
invention are represented by sequences AAA78277-A78318 and
AAA78335-A78337, while humanised anti-fas Ig DNA sequencing primers are
represented by sequences AAA78321-A78334 and AAA78338-A78367, Primer
sequences AAA78212 are specific for murine Ig DNA, and are used in
the production of the agent of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ATGAGGCTCCCTGCTCCTGGGGCTGCTAATGCTCTGGGTCCCAGAATCCAGTGG 100

Primers specific for the anti-human Fas antibody, light, heavy and kappa chains used in the invention are represented by sequences AAA78213-A78266. Primers used for sequencing the human Ig DNA used in the invention are represented by sequences AAA78217-A78318 and AAA78335-A78337, while humanised anti-Fas Ig DNA sequencing primers are represented by sequences AAA78217-A78318 and AAA783218-A78335. AAA78212 are specific for murine Ig DNA, and are used in the production of the agent of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to antirheumatic agents which comprise as active ingredients an immunoglobulin M (IgM) protein. The IgM protein does not include a J segment, has apoptosis inducing activity, and consists of a light and heavy chain polypeptide produced synthetically. The agents of the invention exhibit antirheumatic and immunosuppressive activity and can be used to treat autoimmune diseases, especially rheumatism. The IgM molecule used in the invention has human Fas-antigen binding properties. Included in the invention are nucleotide sequences of the IgM light and heavy chains (see AAA/8267-A78272) and the nucleotide sequences (see AAA/8201-812918 and AAB1291), and nucleotide sequences of the humanised anti-human Fas Ig CH11 (see AAA/8202-A78206) and protein sequences (see AAB12913-B12918).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          601 AGCAGCACCCTGACGCTGAGCAAAGCAGACTACGAGAAACACAAAGTCTACGCCTGCGAA 660
selection of donor residues from CH11 to be grafted onto acceptor molecule RPMI6410'CL. 4 Light chain sequences (see AAW1876-79) have been designed, and each can be used in combination with either of 2 heavy chain sequences (see AAW1880-81) to provide novel, claimed humanised CH11 IgM antibodies that lack a J chain. These humanised anti-human Fas antibodies are capable of inducing apoptosis in cells expressing Fas (e.g. synoviocytes) and are useful in the treatment of autoimmune disease and chronic rheumatchid arthitis. DNA sequences encoding the humanised antibodies are claimed, as are vectors such as pHkappaRF2-52 including the VL-RF nucleotide Requence, and host cells such as Escherichia coli pHkappaRF2-52 (FERM BP-5862).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gape

rejection of transplanted organ or tissue for treating proliferative and hyporproliferative diseases, for treating reversible obstructive airways disease, intestinal inflammations and allergies e.g. Crohn's disease and ulcerative colitis, food-related allergies e.g. migraine, rhinitis and eczema, and other types of allergies. The present nucleic acid sequence encodes the light chain of 786, a primatised antibody used in the invention to induce apoptosis.

2 DNA sequences (AAT62511 and AAT13847) respectively code for primatised forms (AAW01819 and AAW01820) of the light and heavy chains of cynomolgus monkey anti-human B7.1 antigen monoclonal antibody 7B6. Cloned 7B6 light and heavy variable genes are inserted into an expression vector (pref. NEOSPLA) which contains human light and heavy chain constent region genes to allow prodn. of primatised antibody in e.g. CHO cells. Primatised 7C10 and 16C10 anti-B7.1 antibodies have also been produced (see also AAW01817-18 and AAW01821-22). The primatised antibodies inhibit the B7:CD28 pathway, making them useful immunosuppressants for the treatment of autoimmune disorders and graft-versus-host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

The present invention relates to a new use of a monoclonal antibody which specifically binds to B7.1 antigen (CD80) and/or B7.2 antigen (CD86) for inducing the apoptosis of B7.4 cells. The invention is useful for treating diseases such as B cell cancer, lymphoma, a cancer where B cells promote the growth and/or metastasis of tumours, B cell lymphoma, B cell leukaemia, and autoimmune diseases such as idopathic thrombocytopenia purpura, systemic lupus, erythematosus, type 1 diabetes mellitus, rheumatoid arthritis, psoriasis, aplastic anaemia, inflammatory bile disease, allersy, multiple sclerosis or graft-ve-host disease. The antibody is useful for immunosuppression in a human or animal and for treating or preventing resistance to or
